SUMMARY

Developer at Learn Tech (since Aug 2024) building learning platforms across Next.js/React and Java Spring Boot: xAPI tracking, PDPA-compliant data handling, payments and admin reporting. Finishing a B.Eng. in Computer and Electronics Engineering at Ramkhamhaeng University (2026). Open to Developer roles.

SKILLS

Languages: TypeScript, JavaScript, Java, SQL, HTML, CSS
Front end: React, Next.js, Tailwind CSS
Back end & data: Spring Boot, REST APIs, MySQL, SQL Server, Prisma, Drizzle, Flyway
Testing & tools: Vitest, JUnit, Playwright, Testcontainers, Docker, Git (GitHub, GitLab), Figma
Standards: xAPI / SCORM, PromptPay QR (EMVCo)
AI-assisted development: Claude Code, Codex — spec-first planning; I review, test and own all merged code

EXPERIENCE

Junior Developer — Learn Tech, Bangkok | Aug 2024 – Present

- Company LMS: built a system-wide audit log (Spring interceptor + admin API) with a filterable viewer and CSV/Excel export, plus a 30-day trash with restore and a scheduled anonymization job for PDPA.
- Video learning: built the xAPI video player (play/pause/seek/resume statements, forward-seek locking) and a transcription service, first in Spring Boot 4 (yt-dlp, ffmpeg, faster-whisper), later rebuilt in Python/FastAPI with Gemini (38 pytest tests), with an approve-before-sync step.
- Petrochemical manufacturer's e-learning platform: AI chat that answers only from verified, cited lesson-video transcripts, and a v2 certificate template with live-data preview and selectable fonts.
- Contributed to a government education e-learning platform: Spring Boot 3.1 backend (28 controllers, 130 endpoints) and React 18 portal; fixed data-validation issues and wrote the API documentation.
- Client membership & booking platform (Spring Boot 3.4, React 19, SQL Server): implemented the booking-coordinator snapshot entity and patch job with a SQL migration, and fixed withholding-tax and tax-ID handling in invoices and emails, with unit tests.
- Shipped security hotfixes for a client LMS: redirect validation, safe XML parsing and an admin IP allow-list (16 unit tests), with SIT/UAT documentation.
- Exam bank backend: autosave, review and submit flows, and retry-safe result delivery to the LMS, with unit tests.

PROJECTS

hatch.dev — Web studio management system | 2026 | Next.js 16, TypeScript, MySQL, Drizzle | hatchweb.dev

- Client portal and admin back office: quotes → invoices → receipts as Thai PDFs (React → Gotenberg), PromptPay QR payments with 3% withholding tax.
- Gapless document numbering with row-locked counters (SELECT … FOR UPDATE) and concurrency tests; slip checks that reject reused slips.
- Set the UX/UI direction in Figma and built it with AI coding agents against a written spec and typed contracts; 139 Vitest tests and Playwright end-to-end tests at three viewports.

GoSkillUp LMS — Final-year project | 2025 – Present | Next.js 16, Prisma, MySQL | github.com/HaroonKasor/lms

- Course builder, enrollment (self sign-up, bulk import, QR), quiz engine, automatic certificates and 11 admin reports.
- Built-in xAPI statement store and TinCan player with safe package extraction; AI learning assistant (Gemini with OpenRouter/Groq fallback).
- Deployed with Docker Compose and Caddy (automatic TLS), with backup/restore scripts and a database health check; live demo at lms.hatchweb.dev.

WorkCatch — Thai task-capture app | 2026 – Present | Spring Boot 3.5, React 19, MySQL | workcatch.hatchweb.dev

- Thai date-phrase parser (~500 lines) that asks back on ambiguity instead of guessing; at-most-once LINE reminders with full attempt logs; an AI assistant that answers from the user's own tasks, with opt-in habit memory and a daily quota per user.
- Ownership checks on every resource, verified by a test that sweeps all owner-bound endpoints (404 for non-owners); 85 endpoints, 42 backend test classes.

EDUCATION

B.Eng. Computer and Electronics Engineering — Ramkhamhaeng University, Bangkok | 2022 – 2026 (expected)

LANGUAGES

Thai, English
