

HAROON KASOR

Bangkok, Thailand | 062-496-9217
haroonkasor.dev@gmail.com | github.com/HaroonKasor | LINE: harunfy

Jr. Developer with experience building responsive web applications, internal dashboards, and learning platforms across both the front end (Next.js/React) and back end (Java Spring MVC and Spring Boot). Skilled in turning requirements and UX/UI designs into production-ready features with clean, maintainable code. Comfortable working with modern web technologies and collaborating across teams to deliver practical, user-friendly solutions.

WORK HISTORY

Aug 2024 – Present | Learn Tech – Bangkok, Thailand

Junior Developer

- Company LMS platform — main product responsibility, developing and maintaining features across the full stack:
- Audit logging — built a system-wide audit trail with a filterable admin UI and CSV/Excel export.
- User lifecycle — 30-day soft delete and restore with confirmation UI, and an automated anonymization purge job supporting PDPA compliance.
- Video learning tracked with xAPI — built the learning player that emits xAPI statements (play, pause, seek, completion) with resume and forward-seeking locking, plus a Spring Boot 4 transcript microservice (yt-dlp, ffmpeg, faster-whisper) with a review and approval workflow that syncs transcripts into course sections.
- Admin reporting & content tools — dashboard deep links to enrollment and certificate reports, an xAPI statement viewer, and content export.
- Client LMS — developed features, fixed login-security issues, and prepared formal SIT/UAT documentation.
- Client membership & training-booking platform (Spring Boot 3.4, React 19, SQL Server) — built the booking coordinator snapshot system (entity, async backfill job, SQL migration), VAT and withholding-tax calculation with tax-ID mapping in invoice generation (with unit tests), transactional email templates, and back-office screens.
- Client expert-database website — built the publications pages, registration flow, and Excel report export.
- Government e-learning platform (OBEC) — developed the Spring Boot 3.1 backend (130 endpoints across 28 controllers: LMS courses, batches and lessons, enrollment approval, assessments, role permissions and a VR game telemetry API) and the React 18 portal; wrote the 129-endpoint API document and an API smoke-test script.
- VR science games — built the Unity integration layer connecting 18 games to the backend (JWT login, per-game event wrappers, report reader).
- SCORM/xAPI learning content — packaged SCORM courses and configured xAPI course players delivered to multiple clients.
- System & database operations — monitored client websites with monthly reports, migrated databases, and managed production databases over VPN.
- Documentation & QA — wrote user manuals, UAT test suites, and delivery documents for multiple projects.

2026 | Ramkhamhaeng University – Bangkok, Thailand

Final Year Project – GoSkillUp LMS Platform

- Designed and developed a capstone Learning Management System for learners and administrators.
- Built features for course management, enrollment workflows, quizzes, certificates, and reporting.
- Built with Next.js 16, React 19, Tailwind CSS, Prisma and MySQL; deployed with Docker Compose and Caddy, live at goskillup.me.
- Added xAPI (Tin Can) package support with a built-in statement store and viewer, an AI learning assistant (Gemini with OpenRouter and Groq fallback), and 11 admin reports.

EDUCATION

2022 – PRESENT | RAMKHAMHAENG UNIVERSITY – BANGKOK, THAILAND

Bachelor of Engineering in Computer and Electronics Engineering

SKILLS

Front-End	React, Next.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS
Back-End / Data	Java, Spring Boot, MySQL, SQL Server, API Integration
Tools	GitHub, GitLab, Figma, Docker, Unity, Playwright, XAMPP, Eclipse
AI Tools	Claude Code, OpenAI Codex — AI-assisted development (planning, code generation, review)
Soft Skills	Problem Solving, Team Collaboration, Communication, Attention to Detail
